BATHROOM DELIVERY PROGRAM

INTRODUCTION

Shower boards, design objects and building boards from Stadur

Stadur combines supreme quality 'Made in Germany' with long-standing competence in the field of floor-level shower areas, bathroom design and wellness. Edges and thresholds in the shower area belong to the past thanks to Stadur shower elements. Top-quality materials guarantee many years of unlimited shower fun. The bathroom becomes part of a comfortable living concept rather than just a functional wet area thanks to the versatility of Stadur products.

All Stadur shower elements are provided with a factory-fitted, dual-sided wall sealing tape; footstep sound absorption and a fire protection solution can also be offered. We recommend our Rapid substructure block instead of a mortar bed for height compensation. This time-saving lightweight component made of extruded polystyrene hard foam, which can be universally used for all other Stadur boards, has a dual-sided special coating and factory-fitted drain recess. Material thicknesses: 20, 30, 40, 50, 60 and 80 mm.

Basic Board Unlimited in shape and tile

Unlimited in shape and tile. The Basic Board shower tray substrate element in many versions enables the fast and easy installation of floor-level shower areas. Low construction height, even gradient of approx. 2-3 % to the floor drain and immediate availability for tiling with ceramic or alternative floor coverings, allows fast and trouble-free assembly without thresholds and edges. Custom-made products up to a size of 2500 x 1500 mm provide limitless creative space for individual planning. A fire protection insert is available for public buildings. Various grating designs round off the look of the element. Eccentric and height-adjustable designs give you creative freedom. The extra-flat 'old building renovation' version makes the Basic Board series a real all-rounder!

Line Board Aesthetics with a clear line

The visually attractive Line Board is available in two versions in oblong and square designs, in sizes up to 2500 x 1500 mm. Channel lengths up to 2000 mm leave nothing to be desired for the customer. Owing to its special coating, the Line Board can be clad immediately with individual tiles. Alternatively you can select between different finished surfaces, such as exclusive ceramic or teak wood. Many colours and surface finishes are available. To round things off visually we offer you various design grates as well as the choice of single or multi-sided slopes.

Basic gradient wedge The optimum solution for integrated wall drains

The Basic gradient wedge in many different versions enables the fast and easy construction of floor-level shower areas that are drained via a wall drain. The low construction height, even gradient of about 2-3 % to the integrated wall channel as well as the possibility of immediate tiling enable fast and easy installation without thresholds and edges. Custom-made products up to a size of 2500 x 1500 mm provide limitless creative space for individual planning.

HighTec Board Complete shower tray with ceramic covering

The superior-quality, skin-friendly ceramic surfaces have the excellent scratch resistance MOHS hardness 8. This is only exceeded by the hardness of a diamond. In addition the surface is resistant to aggressive liquids of all kinds. With four standard colours and 12 further colours, the exclusive surfaces offer individual creative space. A uniform image is achieved thanks to the factory-revised cover in the same ceramic design. You can set accents in your bathroom by the combination of large-size wall elements and floor coverings in the same look.

Nature Board A composition of nature and technology

Our teak wood originates from plantations where sustainable forestry is practised and is used on account of its high natural oil content as a shower element for unique showering enjoyment. Thanks to its properties, teak wood has a high resistance to mould and various chemicals. Four different surface laying patterns can be chosen with equilateral squares. Teak wood is anti-slip and free of splinters. A natural shower experience becomes reality with this board.

Life Board Shower area with a wide colour range in MineRAL

We offer the pore-free cast mineral surface in four standard shapes. Innumerable dimensions and special shapes are possible on enquiry. The Life Board is available as standard in sanitary white. The surface can be supplied on enquiry in any RAL colour. A Grip anti-slip surface according to Class B (DIN 51097) is optionally available. This versatility facilitates the planning and design of shower areas in private households, wellness facilities, hotels, clinics, rehabilitation centres, old people's homes and public swimming baths.

Elegance Board Luxury natural stone shower areas

Due to its natural stone surface, each board is unique. Two designs are available: Compact - means a fully ready-to-install Elegance Board with a granite surface and a substructure. The cover is supplied with a matching natural stone surface. Basis - the substructure has a dual-sided special coating for on-site cladding with granite up to max. 20 mm. The drain cover is factory-prepared for the on-site fitting of natural stone.

Round & Wall System Adventure showers - simply different

Adventure showers are not only restricted to wellness areas; they are becoming increasingly popular in private households, too. Round and curved showers as well as shower elements with wall systems allow the easy design of shower landscapes and are a popular alternative to conventional shower partitions. Thanks to the dual-sided special coating of the side walls and the floor element, the immediate fitting of ceramic coverings is possible. A fittings panel is optionally available for the installation of fittings on site.

Relax Indulge in sweet idleness

Whether free-standing or integrated in shower cubicles, relaxation furniture such as benches and loungers are becoming ever more popular. Thanks to the highly pressure-resistant expanded polystyrene hard foam, the comfortable Relax elements are ideal for use in spas, saunas and hotels as well as in public swimming baths and private households. Whether round or square, as building kit or solid body - no limits are imposed on your ideas for rest and relaxation. Draw or describe your ideas and we will draft the matching solution.

Furniture Design Furniture for every desire

Whether washstands, shelf systems or curved claddings - with our BaseTec Vario systems no limits are imposed on you and your fantasy. Simple processing, reduced adhesive use in conjunction with increased stability and the possibility of forming support your individuality. The combination of high insulating properties, water-impermeable polystyrene hard foams and safe protection against mould create an ideal surface for mosaic, plastering techniques and all tile formats.

BaseTec Building Board One for all

Thanks to its special coating the BaseTec building board is the ideal solution for wet cells/spa construction. It combines low dead weight with a high degree of stability. The dual-sided dimensioning and cutting to size with the cutter or a jig saw saves time when processing. More and more users are recognising the saving in adhesive consumption of up to 40%. Material thicknesses from 4 mm to 80 mm are available in both 2600 x 600 mm and in XL-format. Individually manufactured BaseTec bracket for on-site pipe claddings rounds off the range.

BaseTec angle Cladding done the easy way

This product is very suitable due to its extraordinary versatility. BaseTec angles of all leg lengths and boxes can be made with standard milling. With additional milling the BaseTec angle can be made into a wide range of shapes even up to rounded off claddings.

Vario building board The robust multi-talent

The Vario building board is a hard foam support element, ready for tiling and versatile in daily use. The homogeneous special coating can be formed in ways that is unimaginable for other building boards. Long-established cutting and shaping techniques are no problem thanks to its unique coating. Even opposite structures are possible. Available in thicknesses of 10 to 80 mm. Also available as longitudinally and transversely slotted board for creative freedom.

Vario slotted board Individual design

The Vario slotted board imposes no limits on your creativity. The board is longitudinally or transversely slotted in the factory and thus enables individual shapes to be created. Regardless of whether you want to design claddings for bath tubs, individual bathroom furniture or curves and sinuous lines - with the Vario slotted board we offer you the optimum solution for every project.

BaseTec NF Easy processing for the floor solution

The ideal solution for light, load-bearing floor designs. The absolutely tight connections to Stadur shower boards present no problems due to the easy-to-install groove and tongue system. Problem-free transport, low weight and easy cutting to size with a jack saw or hand saw allow uncomplicated, fast and cheap processing. Another point is the saving of energy: with a thickness of 40 mm the NF flooring board achieves a U-value of only 0.762. Laying on wooden or concrete floors is easily possible.
